## Material Processing & Handling Information

**Material:** AroStruct

**Material Type:** Fast Set Spray Polyurea Coating

**Application:** Concrete, Tile, CMU, Wood, Coating Reinforcement, and other substrates

**Application Process:** High pressure heated equipment with impingement gun

<b>Process Equipment:</b>	<b>Proportioner</b>	<b>Dispensing Gun</b>
<b>Graco:</b>	EXP-1 (Electric)(low output only) EXP-2 (Electric) EXP-3 (Pneumatic) H-XP2 (Hydraulic) H-XP3 (Hydraulic)	Fusion AP (Air Purge) Fusion MP (Mechanical Purge) GX-7 Standard (Mechanical Purge) GX-8 (Mechanical Purge) Probler (Air Purge) Probler P2 (Air Purge)
<b>Gusmer:</b>	FF 2500 (Hydraulic) FF 3500 (Hydraulic) H-20/35 (Pro Hydraulic)	GX-7 Standard (Mechanical Purge) GX-7 400 (Mechanical Purge) GX-7 DI (Mechanical Purge) GX-8 (Mechanical Purge) GAP Pro (Air Purge)
<b>GlasCraft:</b>	MX, MXII (Pneumatic) MH, MHII, MHIII (Hydraulic) SuperMaxi, Guardian A Series	Probler (Air Purge) Probler P2 (Air Purge)
<b>Gama:</b>	Evolution G-250H	GDI (Mechanical)
<b>PMC:</b>	PMC GH-40 (Hydraulic)	PMC A-P2 (Air Purge)
<b>Pentech USA:</b>		PalmGun or MG Gun (low output)
<b>WIWA:</b>	DuoMix 460 (Pneumatic)	Pentech MG (Mechanical)
<b>Material Supply Pumps:</b>	<b><u>Pump Type</u></b>	<b><u>Continuous delivery/output at 70°F/25°C</u></b>
<b>Graco:</b>	Standard 2:1 (T1)	Up to 1.75 gpm, 9.5 lpm
	Diaphragm:	
	• Husky 515	Up to 5 gpm, 26 lpm
	• Husky 716	Up to 11 gpm, 61 lpm
	<b>IPM/Gusmer 2:1 (T2)</b>	Up to 3.85 gpm, 21 lpm
	<b>IR/ARO (2:1)</b> (for fluids <1000 cps)	Up to 1.4 gpm, 7.6 lpm
<b>Process Temperature:</b>	160° F optimum (150°F min., 170°F max)	
<b>Process Pressure:</b>	2,000 - 2,500 psi optimum (1,700 psi min, 3,500 psi max)	
<b>Gel Time:</b>	10 -12 seconds	

<b>Tack Free:</b>	~ 2 minutes												
<b>Light Traffic:</b>	60 minutes												
<b>Full Cure:</b>	7 days												
<b>Moisture Content:</b>	Calcium chloride test: 3 lb/24 hr/1,000 ft <sup>2</sup> 5% maximum as per ASTM F2170 & ASTM F2420												
<b>Application Temperature:</b>	-40°F and higher. Note that <b>AroStruct</b> will cure at sub-freezing temperatures, but the effects from these conditions may impact the application in a variety of ways. It is recommended that material and equipment ambient temperatures be kept at 60°F or above. Frozen concrete substrates with high moisture content will affect coating adhesion and long-term performance.												
<b>Dew Point:</b>	Substrate temperature must be 5°F above dew point and rising before application of coating materials.												
<b>Surface Prep:</b>	Abrasive blast per ICRI Technical Guideline No. 310.2-1997 or SSPC SP13. Achieve a concrete surface profile of ICRI CSP-3 to CSP-5.												
<b>Surface contaminants:</b>	Check for soluble salts on surfaces to be coated. Test with Chlor*Test. If amount of soluble salts exceeds recommended limits, treat with Chlor*Rid. Repeat process until acceptable limits are reached. Maximum amounts of soluble salts (micrograms per square centimeter): Chlorides - 3 immersion, 7 non-immersion Nitrates - 5 immersion, 10 non-immersion Sulfates - 10 immersion, 20 non-immersion												
<b>Substrate Parging:</b>	Formed walls with honeycombing or concrete surfaces with large exposed aggregate. Recommended that the surface is rubbed or parged to eliminate surface defects. Use a polymer modified resurfacing material approved by VersaFlex.												
<b>Surface Primer:</b>	Most substrates: <i>VersaFlex VF 20</i> (6 to 10 wet mils): Two-component primer. Maximum overcoat time: 72 hours, after which a light recoat is required.  Steel only (if required): <i>VersaFlex PW-1</i> (2 to 3 wet mils): Single component primer. Maximum overcoat time: 24 hours, after which a light recoat is required. PW-1 is only needed to prevent flash rust.												
<b>Adhesion Testing:</b>	Adhesion to concrete: Minimum 150 psi. Cohesive failure of concrete is optimum. Pull values will vary depending on concrete strength. Utilize ASTM D7234.												
<b>Coating Application:</b>	Coating thickness will vary depending on intended use, surface roughness and profile. The International Concrete Repair Institute (ICRI) has developed a standard for Concrete Surface Profile (CSP) ranging between 1 (smoothest) and 9 (Roughest).  The following chart gives approximate minimum coating thickness to achieve a continuous coating using the ICRI CSP standard.												
	<table> <tr> <td>CSP-1 &amp; CSP-2</td> <td>45 - 55 mils</td> </tr> <tr> <td>CSP-3</td> <td>55 - 60 mils</td> </tr> <tr> <td>CSP-4</td> <td>60 - 65 mils</td> </tr> <tr> <td>CSP-5</td> <td>65 - 70 mils</td> </tr> <tr> <td>CSP-6</td> <td>70 - 75 mils</td> </tr> <tr> <td>CSP-7</td> <td>75 - 80 mils</td> </tr> </table>	CSP-1 & CSP-2	45 - 55 mils	CSP-3	55 - 60 mils	CSP-4	60 - 65 mils	CSP-5	65 - 70 mils	CSP-6	70 - 75 mils	CSP-7	75 - 80 mils
CSP-1 & CSP-2	45 - 55 mils												
CSP-3	55 - 60 mils												
CSP-4	60 - 65 mils												
CSP-5	65 - 70 mils												
CSP-6	70 - 75 mils												
CSP-7	75 - 80 mils												

---

CSP-8 80 - 85 mils

CSP-9 85 - 90 mils

\*\* Please consult the VersaFlex Spray Gun Configuration Recommendation PDF for specific modules and tips.

\*\*\* VF suggests utilizing SSPC guidelines relating to standards (PA2 for steel, Level 3 & PA9 for concrete – Level 4) as established for the appropriate environmental zone.

	<b>Storage Temp.</b>	<b>Storage</b>	<b>Special Handling</b>
<b>'A' Side</b>	60°F min. 70°F optimum	Keep dry. Keep from freezing. Store in covered temperature controlled environment if possible.	Use dry air desiccant for intake vent on drum.
<b>'B' Side</b>	60°F min. 70°F optimum	Keep dry. Keep from freezing. Store in covered temperature controlled environment if possible.	Mix well with mixer to re-disperse any settled pigment.
<b>Safety:</b> Please consult product MSDS for full details. Safety glasses, Rubber gloves, Protective clothing, Organic vapor or fresh air respirator.
