Vancouver Island, British Columbia, Canada

Market

Potable Water

Project

Small Potable Water Storage Tank

System

AquaVers 405

Applicator

Canadian Induracoat Corporation, Vancouver & Victoria, British Columbia, Canada

Owner

Private

On the west coast of Vancouver Island, secluded in a rainforest sits a small potable water storage tank. Canadian Induracoat Corporation completed the system application. The original bolted steel construction storage tank was suffering severely from failure in the factory applied epoxy coating. The coating on the inside of the storage tank was blistering and falling off the tank walls. AquaVers 405 was applied at an average of 60 mils thickness to the entire interior tank, roughly 41,000 gallons. The project lasted less than 5 days from sand blasting to complete coating system installation. This simple project was quick, and the team experienced no issues during the installation process. In this pilot project, the owner of the storage tank is convinced that AquaVers 405 is the long-term solution to extend the life of similar tanks.
