Project

Speed Bump – Parking Deck

System

Quick Mender XO/SL 60 Joint Fill

Date

October 2018

This was an excellent project application in Denver, CO for VersaFlex utilizing Quick Mender XO (urethane repair material) and SL60 exterior rated joint filler on the complete removal of 3.5” of a speed bump on a parking deck structure. An aggregate blend added to Quick Mender XO was used to fill in the removed area providing a slurry filled urethane-based mortar. SL60 joint filler along with bond-breaker design were installed along termination points to provide a flexible, durable and long-lasting repair to this heavy traffic parking structure. Quick Mender, the Swiss Army knife of concrete repair materials.
